## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

2. Claims 9-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. The terminology used in the claims is very confusing. Component (A), the styrenic resin (claim 1), can be a rubber modified polystyrene resin (claim 12), meaning HIPS. On the other hand component (C) in claim 1 is a rubber modified polystyrene copolymer, meaning ABS. The difference between a rubber modified polystyrene resin and a rubber modified polystyrene copolymer would not be apparent to one having ordinary skill in the art, resin, polymer and copolymer are used interchangeably in the art. Differentiation is requested. Furthermore claim 21 contains improper Markush language, because "and/or" is treated like "and".

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 9-13, 15, 16 and 18-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohzeki 4,966,814.
6. Ohzeki discloses polyphenylene ether, ABS having 3-9% acrylonitrile based on styrene and acrylonitrile, polystyrene and phosphoric acid ester in claim 1, high impact polystyrene in claim 5, aromatic phosphoric acid esters in claim 6, examples of the aromatic phosphoric acid esters in column 9, lines 46-56 and other additives in column 11, lines 31-44. Less than 40 includes zero (claim 15). Applicants' claims are not novel.

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1714

9. Claims 9-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohzeki 4,966,814, in view of Trementozzi 4,360,618.

10. Ohzeki has been discussed already. Trementozzi teaches polyphenylene ether and low acrylonitrile in claim 1, triaryl phosphates in claim 5 and in column 2, lines 6-11 he discusses the substitution of acrylonitrile with methacrylonitrile. It would have been obvious to one having ordinary skill in the art; at the time the invention was made, to replace the acrylonitrile with methacrylonitrile in the ABS of Ohzeki, since Trementozzi shows their equivalence.
